## ABOUT BLAGDON

### Our Background

Blagdon Pump was founded in the early 1950's in the North East of England as a specialist pump manufacturer. In 1979 production of **AIR OPERATED DOUBLE DIAPHRAGM PUMPS** commenced and we soon became a market leader. In 1997 the US based multinational IDEX Corporation acquired Blagdon Pump to strengthen their global position in the double diaphragm market. Blagdon Pump transferred operations to Ireland in 2009. Blagdon Pump is dynamic and evolving. Our aim is to make dealing with us an easy and efficient experience – a service you can rely on for all your pump requirements.

### Our Mission

Blagdon AODD pumps provide high performance, reliable solutions for your pumping needs. We specialise in extreme condition environments and applications, keeping your process moving both above and below ground.

### Our Website

We are committed to offering you a dedicated sales and after sales service which is second to none. Now you can keep up to date with developments as they happen with our website, [www.blagdonpump.com](http://www.blagdonpump.com). We look forward to working with you.

### AIRVANTAGE - Energy Saving Technology

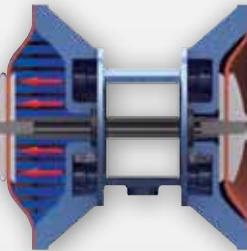

AirVantage is a new technology for Air Operated Double Diaphragm pumps that significantly reduces air consumption over conventional AODD pumps.

#### Conventional

AODD pumps fully expand diaphragms to complete pump stroke, causing increased air usage and expense.

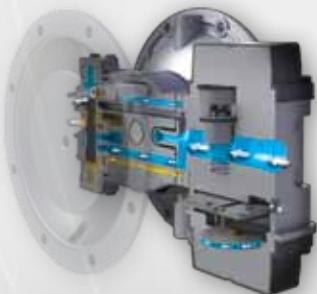

VS.

 **AirVantage**  
ENERGY SAVING TECHNOLOGY

Uses advanced technology to complete full diaphragm expansion using up to 50% less air while maintaining flow.

### Benefits of AirVantage

- Reduces air consumption
- Adapts to process conditions
- Powered only by compressed air
- Saves energy while maintaining flow
- Increases productivity
- Reduces compressor maintenance

Visit the Blagdon AirVantage website at [www.airvantageliquidpump.com/blagdon](http://www.airvantageliquidpump.com/blagdon) to learn more about this award winning technology.

Air operated double diaphragm pumps have long been recognised as the “work horse” of the industry for handling difficult liquids at relatively low pressures and flows. The range of applications is virtually limitless. Blagdon AODD pumps come in many sizes and choices of materials of construction. Almost every type of liquid from highly corrosive acids through high viscosity paints and adhesives, to food and drink products can be pumped.

Blagdon 1/2", 1" and 2" hygienic pumps in polished 316L stainless steel

Blagdon 1/2", 1", 1 1/2" and 2" FDA compliant pumps in polished steel plus assorted standard fluid fittings

Blagdon 1" and 2" high pressure 2:1 pumps available in aluminum, stainless steel

Blagdon metallic pumps available in aluminum, cast iron, stainless steel from 1/4" to 3"

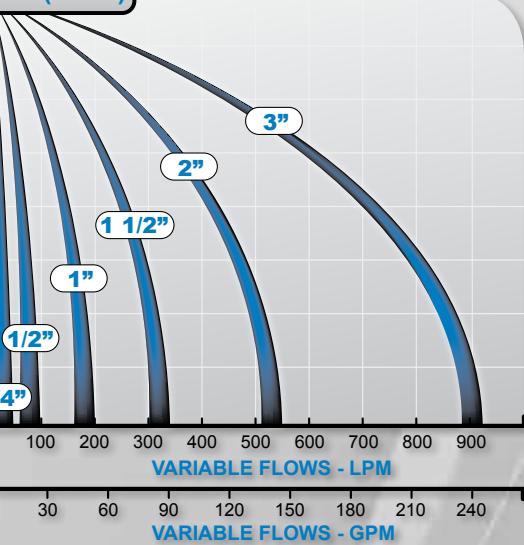

Blagdon non-metallic pumps available in conductive polypropylene, and kynar (PVDF) from 1/4" to 2"

# BLAGDON BENEFITS

Blagdon offers an extensive pump range for handling fluid media safely and cost effectively. We offer low cost ownership, by combining high quality wear parts with low price spares and a vast array of accessories. A flexible modular design of pumps means we can offer short lead times and high degree of customising opportunities. Our experienced staff can provide instant support for installation, servicing, maintenance or a technical enquiry. We offer a fast spares delivery service, with many items in stock for immediate delivery.

## Key Features and Benefits of a Blagdon Pump

- Can run dry without damage or heat build up
- Fully submersible
- Designed to operate at low noise levels
- Leak-free air valves, easily removed for servicing
- Easily maintained – Stripped down quickly without any specialist tools
- Self priming to over 6 metres (19.7 Feet)
- Can safely “dead head” against closed discharge
- Low degradation and minimum product agitation
- Low start up pressures
- Portable and compact – can be remotely controlled
- Safe in hazardous areas – No sparking – Air-driven

## How Air-Operated Double Diaphragm Pumps Operate

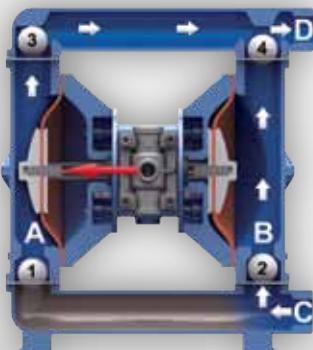

The Pump Chambers are alternatively filled and emptied by drawing fluid in through a common (suction) inlet (C), and out through a common (discharge) outlet (D). The diaphragms in each chamber are linked by a common shaft, so that they move backwards and forwards in unison. Compressed air is directed by the air valve alternatively, behind each diaphragm, to power discharge strokes. Pump speed, fluid output and pressure (or head) is controlled by increasing or decreasing the flow of compressed air to the pump.

## Operation Sequence

### Suction Cycle:

Fluid is drawn into the suction manifold at (C), by the suction stroke of the diaphragm and into chamber (B).

This ‘opens’ the ball valve (2) to allow liquid to enter the chamber. Ball valve (4) is drawn into the valve seat and ‘closed’ by the diaphragm suction stroke.

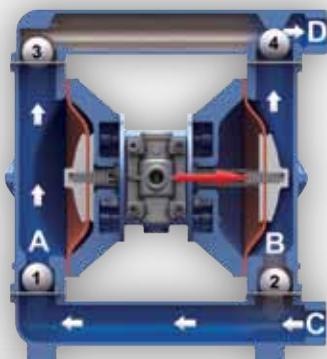

### Discharge Cycle:

In chamber (A), air has been applied to the rear of the diaphragm to force out the fluid in the chamber through the ball valve (3) to the discharge manifold.

The discharge stroke ‘closes’ the ball valve (1) to prevent further liquid entering the chamber.

This cycle is repeated to provide a continuous flow to the discharge manifold at outlet (D).

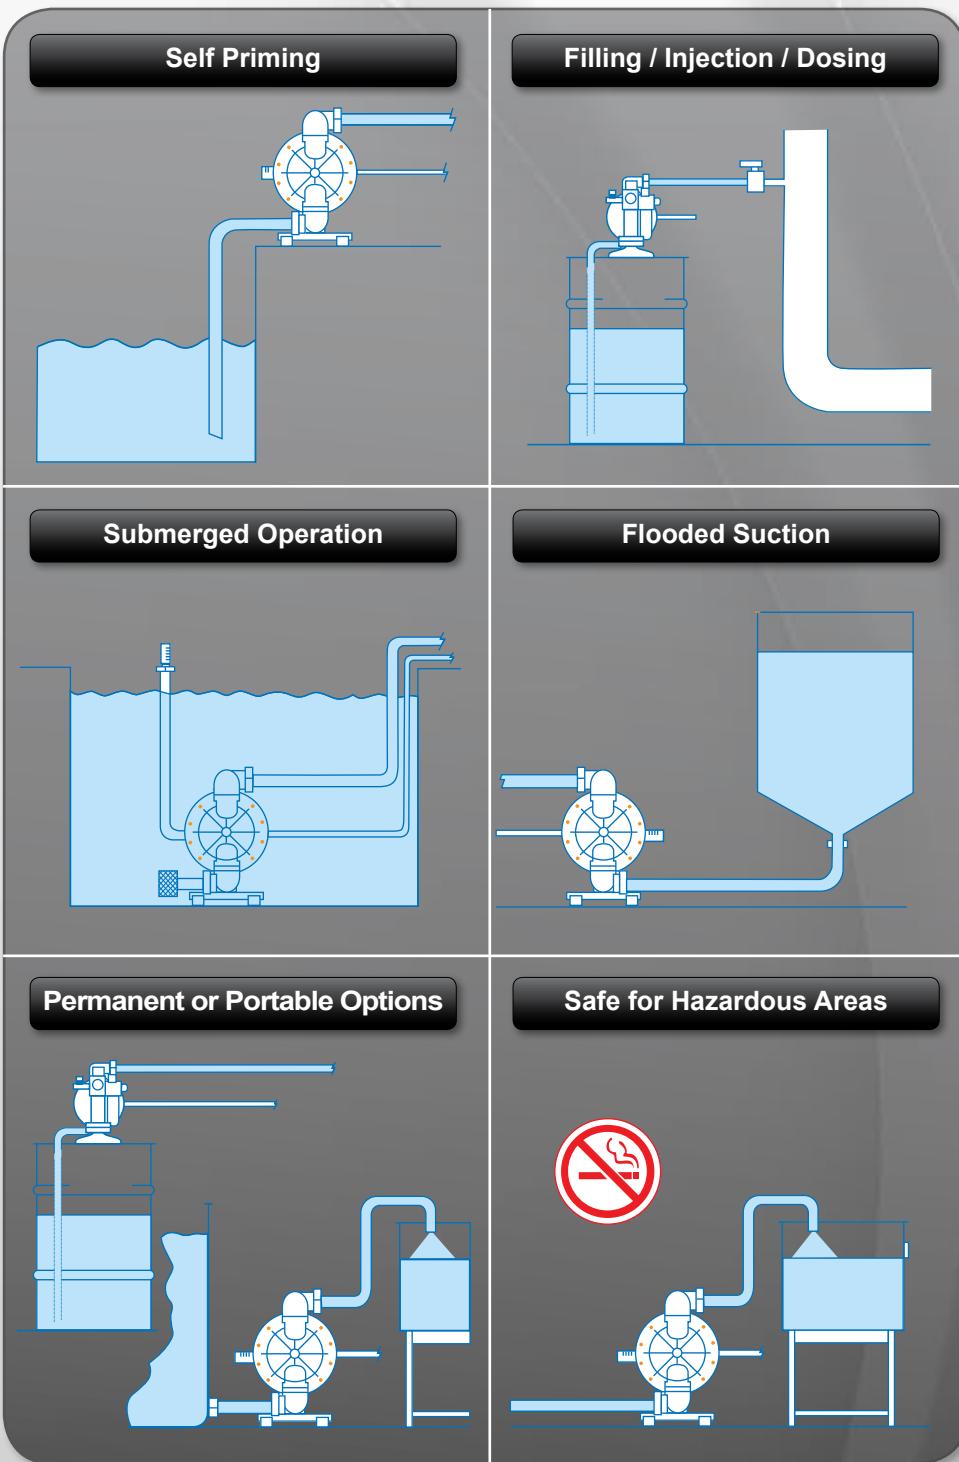

A full list of chemicals and recommended elastomers is available on request, or our sales office can advise on the best pumps and materials for specific media.

#### Typical range of products you can pump.

- **ABRASIVES:** Clay slip, titanium dioxide, mill scale
- **ACIDS:** All mineral and organic acids
- **ADHESIVE:** Solvent and water based
- **ALCOHOLS:** Chemicals
- **CAUSTICS:** Acids
- **CEMENT:** Slip, glazes, clay
- **COSMETICS:** Creams, emulsions, detergents
- **DRILLING:** Mud, grout, lubricants
- **DRINKS:** Soft drinks, spirits, beer, wine, milk
- **EXPLOSIVES:** Suspensions of gun powder, explosives, etc.
- **FOODS:** Liquid and semi-solid foods, flavourings
- **INKS & DYES:** Printing inks, dryers, dyes, sizes and solvents
- **OILS:** Petrol, diesel, hydraulic, and cutting oils, lube oils, animal and vegetable oils and greases
- **PAINT:** Emulsions, latexes, pigments, solvents, resins, thinners
- **PHARMACEUTICALS:** Liquids, creams, and compounds
- **PLATING:** Aggressive acids, salts, sludge and effluents
- **PULPS:** paper, wood, sizes, bleaches
- **RESINS:** Natural and synthetics, water and solvent based, monomeric and polymeric plastics
- **RUBBER:** Gum, latex
- **SLUDGE & WASTE:** Sewage, effluents, coal and lime slurry
- **SOLVENTS:** Aromatic and aliphatics, ketones, aldehydes, esters and chlorinated hydrocarbons, de-icing fluids
- **TIMBER PRESERVATIVES:** Creosote, turpentine, copper napthenate
- **WATER:** All types

## Pump Duties

Blagdon pumps can be installed in any of the models illustrated to perform the following duties: Liquid Transfer, Slurry Handling, Filter Feeding, Circulation, De-watering, Low Pressure, Spray Supply, Tank/Sump/Barrel/Drum Filling and Emptying, Batching/Mixing/Metering/Dosing, and Chemical Injection, etc.

## Recommended Installation Guidelines

For best results, the factory recommends installing the surge suppressor on the discharge side of the pump. Though the more common top-ported pump is shown here, this recommendation also applies to bottom, side and dual-ported diaphragm pumps.

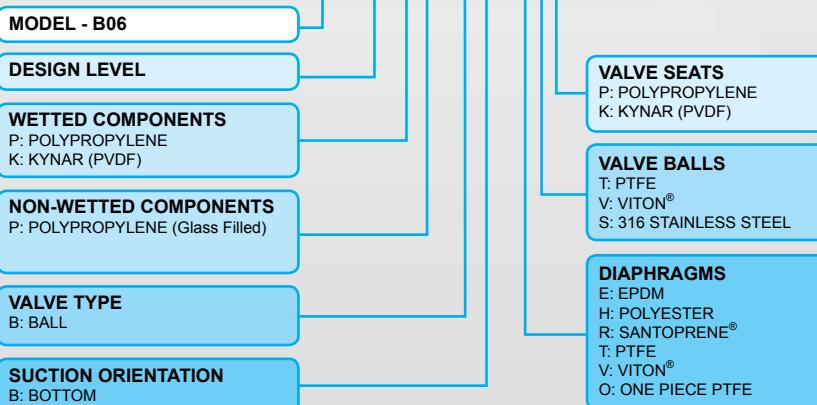

The compressed air supply line to the surge suppressor should connect before a filter/regulator unit limited to inlet air of 125 PSI. To reduce piping and pump connection stresses, we recommend flexible connections on both inlet and outlet piping and air inlet connections.

- Simple construction, easy to maintain
- Self priming, ideal for emptying containers
- Pressures to 5 bar (73 PSI)
- Flow rates up to 16 litres/minute (4.3 gal/min)
- Bolted construction for safety
- Low break out pressure requirement
- Reliable pneumatic air valve system

**Note:** The above Performance Curve has been determined under the following conditions: flooded suction, pumping clean water through a calibrated electronic flow meter with pulsation dampener and silencer fitted.

## Dimensions

- Simple construction, easy to maintain
- Self priming, ideal for emptying containers
- Pressures to 8.6 bar (125 PSI)
- Flow rates up to 60 litres/minute (16 gal/min)
- Bolted construction for greater integrity
- Reliable pneumatic air valve design
- Portable

### Technical Data

#### MOULDED NON-METALLIC SERIES B75 POLYPROPYLENE & PVDF

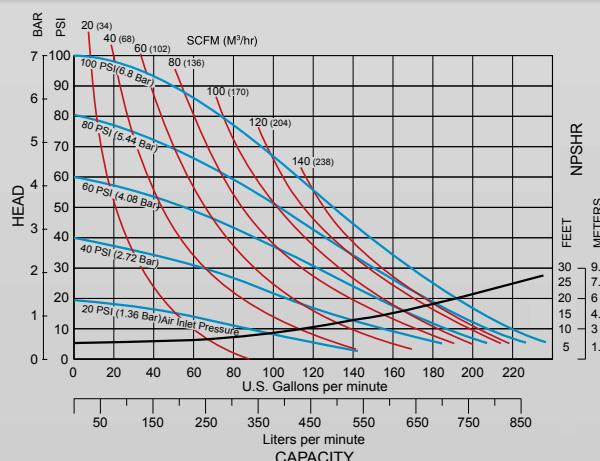

Maximum Delivery: 901 ltrs/min (238 gal/min)  
 Max. Working Pressure: 7 bar (102 PSI)  
 Max. Solid Particle Size: 18 mm. (0.71")  
 Air Inlet: 3/4" BSP(F) / NPT  
 Temperature Limits: Determined by Elastomers  
 Suction Lift (Dry): 5.1 m. (16.8')  
 Fluid Inlet/Outlet: 3" ANSI Flange  
 Installation: Surface mounted  
 Accessories Included: Exhaust air Silencer

#### Shipping Weights:

Polypropylene 105 kg. (231.5 lbs.)  
 PVDF 143 kg. (315.3 lbs.)

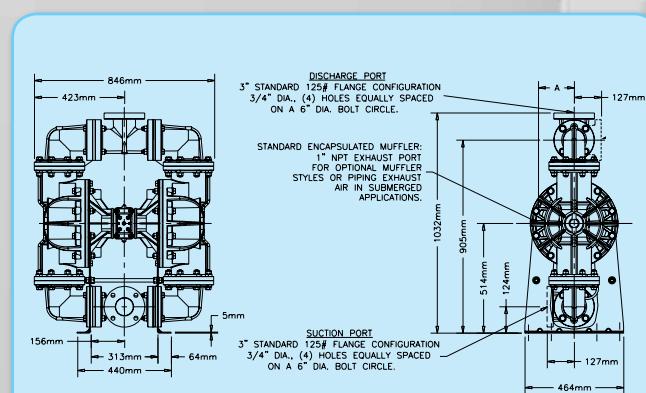

**Shipping Dimensions:** 558 x 965 x 1219 mm.  
 (22" x 38" x 48")

### Performance Curve

**Note:** The above Performance Curve has been determined under the following conditions: flooded suction, pumping clean water through a calibrated electronic flow meter with pulsation dampener and silencer fitted.

### Dimensions

- Air valve will not stall in mid position
- Air valve designed for in-line maintenance
- Available as both end and center ported
- Pressures to 8.6 bar (125 PSI)
- Flow rates up to 889 litres/minute (234.8 gal/min)
- Bolted construction for greater integrity
- Robust construction

#### Typical Code = B75. 01. AA. BB. BBB

#### Dimensions

- All bolted construction
- Ball check valves
- Durable diaphragm connecting rod
- Light weight - portable
- 90° - 180° manifold connection rotation
- Solids range +.25" (6mm) to .38" (9.65mm)
- Dry primes up to 20 feet of water
- Complete center section upgrade kits available

## INDUSTRIES

- Mining
- Construction
- De-watering
- Sewage
- Well-pointing

- Submersible
- Designed for underground use
- High intensity spark free
- Robust construction
- Modular construction, easy to maintain
- Spring loaded vanes for immediate start up
- Pumps solid particles up to 6mm
- Viton seal options for higher temperatures
- Integral baseplate/strainer
- Automatic overspeed control
- Integral oil reservoir - automatic lubrication

## Dimensions

# PUMP ACCESSORIES

## Pulsation Dampener

- Virtually pulsation free flows
- Steadier pressures
- Less vibration and noise
- Simple installation
- Variety of sizes and materials
- Automatically self changing

## Flanges

- ANSI 150 as standard also available:
  - ANSI 300
  - PN16
  - Food Industry - RJT, DIN, TRI-CLAMP
- Ease of connections to pipework systems

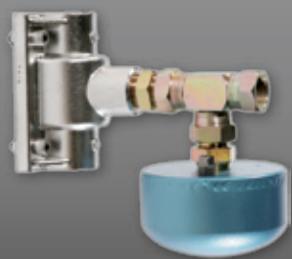

## Valve Block with Sensors

- Batch Control
- Linkage to control equipment
- Greater process control
- 10 - 30v DC, PNP normally open

## Oil Bottle Assembly

- Exclusive to Blagdon Pump
- Robust heavy duty design
- Suitable for arduous installations
- Safe for underground use - no aluminium

## Filter Regulators

- Maintains constant oil density with varying flow
- Remote installation for ease of maintenance
- Ensures clean, filtered air
- Can be controlled independently of other equipment

 **AirVantage®**  
ENERGY SAVING TECHNOLOGY

## Center Section

- Upgrade B75 and X75 pumps to AirVantage
- Simply install a complete air section kit
